CERTIFICATE

This is to certify that "**Fashion Street**" embodies the original work done by **Suraj Talole**, **Sandeep Tompe**, **Shrikant Jamale** and **Aadinath Zade** during this project submission as a partial fulfilment of the requirement for the MiniProject in subject Web Development, Software Engineering and Project Management, and Database Management System of B.Tech. Degree, Fifth Semester, of Pune University during the academic year 2022-2023.

Date:

Place: Pune

Project Guide   Head of Department   Director

(Ms. Poonam Dhamal)   (Dr. Poonam Gupta)   (Dr. R. D. Kharadkar)

(Ms. Deepika Ajalkar)

(Mr. Dnyandeo Khembnar)

IT Department GHRCEM, Pune

ACKNOWLEDGEMENT

It is my pleasure to be indebted to various people, who directly or indirectly contributed in the development of this work and who influenced our thinking, behavior and acts during the course of study.

We express our sincere gratitude to **H.O.D (Dr.) Poonam Gupta** for providing us an opportunity to undergo this Project as the part of the curriculum.

We are thankful to **Ms. Poonam Dhamal** for her support, cooperation, and motivation provided to us during the training for constant inspiration, presence and blessings.

We would also like to thank our **Ms. Deepika Ajalkar** for her valuable suggestions which helps us lot in completion of this project.

We also extend our sincere appreciation to **Mr. Dnyandeo Khembnar** who provided his valuable suggestions and precious time in accomplishing our Project report.

Lastly, we would like to thank the almighty and our parents for their moral support and friends with whom we shared our day-to-day experience and received lots of suggestions that improved our quality of work.

<div align="right">IT Department GHRCEM, Pune</div>

ABSTRACT

Our project is **Fashion Street**. This is a website which helps people to find and buy all type of Products on internet. It is useful in the way that it makes an easier way to buy online. **Fashion Street** is an interactive e-commerce solution providing users with an opportunity to buy products. **Fashion Street** is the online platform which deals with all types trendy apparels for women, men and kids at best prices.

In this website we have basically 2 modules. The first module includes the customer module and second module includes admin module.

The customer have to sign in for Shopping. The registered customer can view all products and he/she can buy the product of his/her need. He/she has to pay and will get home delivery.

The admin module contains the access of admin page on the website. The admin can change everything in the website. He have the ability to add, delete, and update any information regarding the site.

CONTENTS

IT Department GHRCEM, Pune

1. INTRODUCTION

1.1) Purpose:-

Nowadays, one of the biggest transformations using technologies is the online shopping system. It also has almost the same size of the market as a general physical market possesses.

An online shopping system is a process in which people (specific customers) are being provided with the option of purchasing goods and services directly from the seller, all in a real-time environment. Online shopping is an application of the internet as electronic commerce. From the business perspective, customers usually find the products more attractive, on websites, as they get all the details available there.

People in large number are doing online shopping today, and it is not only because it is convenient as one can shop from home, but also because there is an ample number of varieties available, with a high competition of prices, and also it is easy to navigate for searching regarding any particular item.

Our Online Shopping site is available to everyone easily. A person who likes to Shop gives his entire details ie. create a username with a password by which he can modify his details if at all there are any changes in his information given before.

Our site also helps people who are in need of product by giving the details of the products by searching in the nearby shops and provide them with the product they need. If the product is out of stock, the it will notify the buyer after the product is available. If there is any problem regarding products the is also offline customer care services near to you. We provide you with best offers on shopping ie. Coupon codes, gift cards.

The project elucidates the following features.

- ➢ User details
- ➢ Searching products
- ➢ Help center
- ➢ Provides all type of products
- ➢ Trending fashion
- ➢ All brands available

1.2)   Overview

E-Commerce or Electronics Commerce is a methodology of modern business, which addresses the need of business organizations, vendors and customers to reduce cost and improve the quality of goods and services while increasing the speed of delivery. Ecommerce refers to the paperless exchange of business information using the following ways −

- Electronic Data Interchange (EDI)
- Electronic Mail (e-mail)
- Electronic Bulletin Boards
- Electronic Fund Transfer (EFT)
- Other Network-based technologies
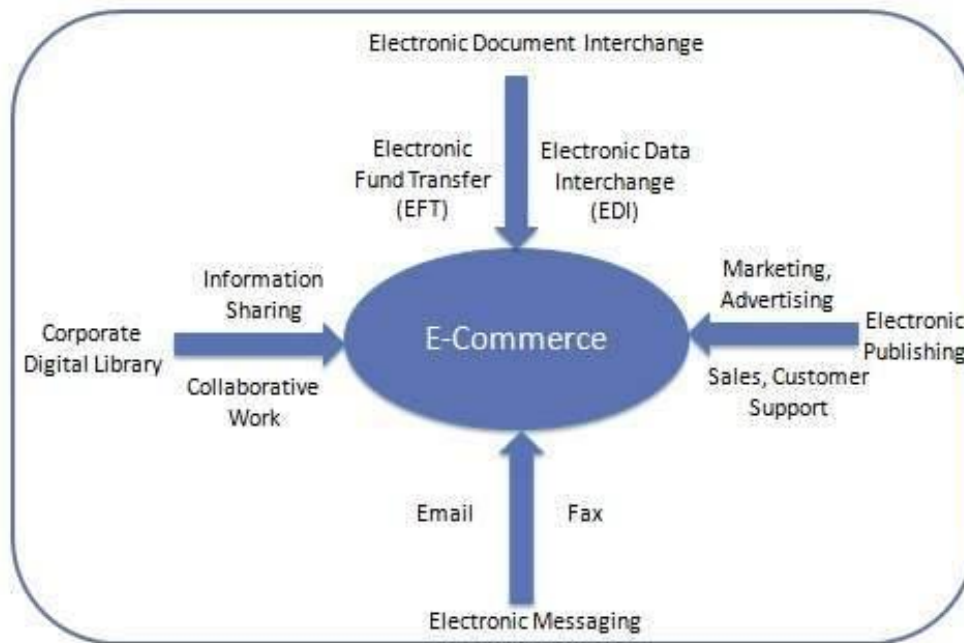

2) DATABASE PLANNING

Data planning:

Database Planning is nothing but the sequential arrangement of the operations to be performed on the given database and arranging the operated data, forms or newly created codes in sequence so that the project can function satisfactorily.

The management activities allow the stages of database application to be realized as efficiently and effectively as possible.

Database planning is the preliminary stage to achieve the objective of project. The various stages included in the Database Planning are as follows:

1. Identification of enterprise plans and goals with subsequent determination of information system needs.

2. Evaluation of current information system to determine existing strengths and weaknesses.

3. Appraisal of IT opportunities that might yield competitive advantage.

2.1) Problem Statement and Objectives

E-commerce provides an easy way to sell products to a large customer base. However, there is a lot of competition among multiple e-commerce sites. When users land on an e-commerce site, they expect to find what they are looking for quickly and easily.

The Online Shopping is a web based application intended for online retailers. The main objective of this application is to make it interactive and its ease of use. It would make searching, viewing and selection of a product easier.

2.1.1) Challenges facing Modern e-commerce And Solutions

1. Cyber & Data Security

When it comes to eCommerce, one of the biggest challenges faced is security breaches. There is a lot of information/data that is involved while dealing with eCommerce and a technical issue with data can cause severe damage to the retailer's daily operations as well as brand image.

Solution:
Be vigilant and always back up your data. Post that, you can install security plugins onto your website to prevent it from getting hacked. There are several plugins out there, pick one that works best for your eCommerce website.

2. Online Identity Verification

When a shopper visits an eCommerce site, how would the retailer know if the person is who they say they are? Is the shopper entering accurate information? Is the shopper genuinely interested in the eCommerce products?

If you do not have the accurate details or information, how do you proceed? Well, it does become tricky. The solution would be to invest in online identity verification.

Solution:
There are different ways to incorporate online identity verification. Some examples include biometrics, AI, single sign on, one time password, two-factor authentication and so on.

3. Attracting the Perfect Customer

Shoppers have a myriad of options to choose from these days. If they are looking to buy a handbag, they do some thorough research before finalizing on one. If shoppers have several options, how do you make sure they pick you? How do you go about finding that perfect customer that wants your product, at your rate and to the places you can ship?

Solution:
Partner with companies that help you target your customers. Digital marketing is preferred over traditional marketing because they can target your ideal customer. While this might not happen overnight, with A/B testing, finetuning and analysis – your products could be showing up to potential customers on different social media platforms.

4. Customer Experience

Customer experience or user experience is key to a successful eCommerce website. Shoppers expect a similar if not same experience as one they would get in a brick and mortar store. The flow of the website, the segmentation of the website and the retail personalization of products based on the shopper's preferences are imperative.

Solution:
There are several ways to improve the user experience. The most important would be to have a clean and simple website so that shoppers can navigate through easily. The next point would be to have clear CTAs (call to action) so that the shopper knows exactly what to do. Here is a post that shows you 10 ways to improve user experience.

5. Customer Loyalty
Here are two facts that show the importance of customer loyalty:(a) It can cost up to 5 times more to acquire a new customer than retaining an existing one and (b) the success rate of selling to a current customer is 60-70% compared to only 5-20% success rate of selling to a new customer.

The above two facts are testament to how important customer retention or loyalty is. Once a customer makes a purchase or utilizes a service from a retailer, they have to make sure that they keep this customer for life. But how is this possible?

Solution:
These are a few different methods that can be used to retain customers. The first would be to have excellent customer service – a customer is happy to have purchased a great product, but they are ecstatic when the customer service is on point. The next step is to keep in touch with the customer via a method that they like – be it an email, SMS or blog posts – be sure to find out what works best for your customer. The last point would be to let them know about new products, sales promotions and special coupon codes for being such loyal customers.

3.Software Requirements Specification

The introduction of the Software Requirements Specification (SRS) provides an overview of the entire SRS with purpose, scope, definitions, acronyms, abbreviations, references and overview of the SRS. The aim of this document is to gather and analyze and give an in-depth insight of the complete Marvel Electronics and Home Entertainment software system by defining the problem statement in detail. Nevertheless, it also concentrates on the capabilities required by stakeholders and their needs while defining high-level product features. The detailed requirements of the Marvel Electronics and Home Entertainment are provided in this document.

3.1 Purpose

The purpose of the document is to collect and analyze all assorted ideas that have come up to define the system, its requirements with respect to consumers. Also, we shall predict and sort out how we hope this product will be used in order to gain a better understanding of the project, outline concepts that may be developed later, and document ideas that are being considered, but may be discarded as the product develops. In short, the purpose of this SRS document is to provide a detailed overview of our software product, its parameters and goals. This document describes the project's target audience and its user interface, hardware and software requirements. It defines how our client, team and audience see the product and its functionality. Nonetheless, it helps any designer and developer to assist in software delivery lifecycle (SDLC) processes.

3.2 Scope

Primarily, the scope pertains to the E-Store product features for making Marvel Electronics and Home Entertainment project live. It focuses on the company, the stakeholders and applications, which allow for online sales, distribution and marketing of electronics. This SRS is also aimed at specifying requirements of software to be developed but it can also be applied to assist in the selection of in-house and commercial software products. The standard can be used to create software requirements specifications directly or can be used as a model for defining a organization or project specific standard. It does not identify any specific method, nomenclature or tool for preparing an SRS.

3.3 Overview

The remaining sections of this document provide a general description, including characteristics of the users of this project, the product's hardware, and the functional and data requirements of the product. General description of the project is discussed in section 2 of this document. Section 3 gives the functional requirements, data requirements and constraints and assumptions made while designing the E-Store.

This document contains the problem statement that the current system is facing which is hampering the growth opportunities of the company. It further contains a list of the stakeholders and users of the proposed solution. It also illustrates the needs and wants of the stakeholders that were identified in the brainstorming exercise as part of the requirements workshop. It further listsand briefly describes the major features and a brief description of each of the proposed system. The following SRS contains the detail product perspective from different stakeholders. It provides the detail product functions of E-Store with user characteristics permitted constraints, assumptions and dependencies and requirements subset.

IT Department GHRCEM, Pune

4.SYSTEM DEFINITION

4.1) Background

In this new era of generation, the numbers of people shopping online has increased significantly throughout the year which give greater impact to the business world. According to Magee (2003), the growth in the number of online shoppers is greater than the growth in Internet users, indicating that more Internet users are becoming comfortable to shop online. This whole new phenomenon of purchasing online kept on increasing due to the existence of the internet that trigger the users to choose the online shopping medium to purchase their items

The capability of purchasing without leaving your place is of great interest to many consumers. Online shopping permits the consumer to buy or to purchase online at anytime and anywhere as long as they are connected to the internet. Online shopping activities have portray several benefits that could attract online consumer to keep on purchasing online. The potential benefits of online shopping for consumers include convenience, various selection, low price, original services, personal attention, and easy access to information, among others.

According to Lee and Turban (2001), there is an enormous potential in the use of Internet for the purchase of goods and services but many users are reluctant to make purchases on the Internet. Consumer hesitate to purchase online as they think that online shopping have greater risk involved as they can only depend on what they see on their screen rather than traditional shopping they could get to touch and see the physical goods itself. Not only this, some other issues that prevent consumer from online shopping is the fear of being cheated, the unsecure payment issues, informational privacy concerns and lack of trust in online shopping system.

4.2) Scope

The basic needs of every person in the world need to be fulfilled at any cost. These needs include food, shelter and clothes. If we have all of these three boxes checked, we can survive in the world. But it's not just about surviving, we need to live in the world. To live, our needs expand to a certain level. This level of expanding our needs may vary for different people. The more we earn, the higher the level of our needs go. Similarly, the people who sell the products to fulfill our needs, use different sources of selling. They range between a low level to high level of selling depending upon the quality of products to be sold out. Some products are sold out in small shops, even on roads while others are sold out in big shopping malls. Sometimes the same product is sold on both levels at the same price, but people prefer buying from big shopping malls. Most of these shopping malls have got more advanced in today's world and have developed the process of online shopping. This trend of online shopping has a great future ahead.

IT Department GHRCEM, Pune

4.3) Administrator Characteristics

1. Ordered Product Detail.
2. Customer Details.
3. Payment and Fulfilment.
4. Create Draft Orders.
5. Abandoned checkouts.
6. Add Unlimited Products.
7. Track Inventory.
8. Manage Products.

4.4) System Analysis:

Analysis of the system can be divided into following 3 phases:

1. Structured Analysis
2. Package Selection
3. System specifications
